

SYSTEM AND METHOD FOR PRESENTING UPDATED DVD INFORMATION SCREEN

ABSTRACT OF THE DISCLOSURE

A system and method for presenting updated movie/DVD content in the information screen that is presented during play of a DVD. The information screen can be updated periodically over the Internet and stored on a local hard disk drive (HDD), such that an older DVD can be played and an updated information screen displayed with content that might list, e.g., new movies that star the actor in the DVD movie, or otherwise might be related or of interest to a person who just watched the DVD movie.
